

# We support smarter charging.

Because we specialise in home, workplace, fleet, and destination electric vehicle charging stuff, the smart thing to do is allow us to help you sort it.

## Charge the smarter way

Eco is partnered with Zest as it is the only company 100% backed by the Government's Charging Infrastructure Investment Fund, which aims to make EV charging affordable, reliable, and easy for current and prospective drivers.

## The Zest Way

### Zero cost

That means no upfront or hidden costs. No maintenance fees or operating expenses. And no grant applications to worry about.

### In it for the long run

We provide a long-term commitment to you and your charge points, assuring top service quality, the best hardware, future-proof technology and equipment maintenance.

### Long-term revenues

We guarantee rental income for rapid DC chargers and provide profit share options for fast AC chargers.

### No hassle all-inclusive service

Planning, installation, site operation, and maintenance. We take care of it all, so you can focus on what's important to you.

### Government-assured

That means no upfront or hidden costs. No maintenance fees or operating expenses. And no grant applications to worry about.

## Top choices, top speeds

We offer a range of smart charge points designed to deliver maximum charging speeds. Smart chargers can also be integrated with renewables and complementary smart products, as well as respond to flexible energy tariffs. Smart, eh?

## Could leasing be the smarter option?

If you're a business owner considering EV charging, then leasing could be the shrewder option for you. Rather than buying electric charging stations outright, leasing our equipment lets you pay for it in manageable monthly instalments via a third-party finance agreement. This means you can invest in other areas to help grow your business whilst offering a sustainable, convenient charging solution for your employees. Smarter all round.

## What can be leased?

We carry out a full free survey and report that consists of:

- AC charging equipment
- DC charging equipment
- Mounting posts
- Prefabricated bases
- Accessories, like cables etc
- Back-office solutions (Hubsta)
- Installation stuff
