ecologic

Don't waste your energy. Monitor it.

Learn how to monitor your energy using Eniscope.

Stage One

How can you control, reduce and eliminate your 'invisible' energy waste?

Because energy is invisible in use, it's so easy to waste. However, *Eniscope makes your energy use visible, so it's much easier to save.

An Eniscope system starts with advanced metering to accurately capture your critical energy data – whether at building,department, circuit or equipment level. The data is collected in real time and delivered to you via a cool range of energy displays. Trust us, seeing your energy consumption as it happens inspires you to cut costs, reduce your carbon footprint and keep up good energy habits over time.

*Eniscope reads, records and displays information from any connected pulse meters and keep up good energy habits over time.

Key benefits:

- Accurate Class – 0.002 metering can monitor up to 8 three-phase channels per unit

- Central Control – Monitor electricity, gas and water (everything in one handy location)

- Web-based – No software required and use any browser from any location

- Scalable – Add more meters or new Eniscope compatible devices whenever you want

- Plug & Play – Simple installation supported by free remote upgrades

Stage Two

How can you be sure which strategies are working best?

Working out where you've wasted energy from a monthly bill is mindboggling. Eniscope's real-time data can stop energy waste in its tracks.

Eniscope's real-time data shows you exactly where your energy is going, second-by-second (your bill can't do that). Make a change and the results are immediately obvious. So that means you can test new strategies and new retrofit copy energy saving equipment and know immediately whether they're having an impact. Businesses around the world are already monitoring individual bits of equipment, isolating energy leaks, exposing energy abusers and verifying their energy saving strategies in real time.

Key benefits:

- Faster – Genuine real-time performance delivers real-time savings

- Alerts – Email and SMS alerts prevent excessive use and supply penalties

- Verification – Check the claims of energy saving products and equipment

- Power Trends – Real-time graphing reveals your pattern of consumption

- Mobile – Check your performance on the go with our smartphone app

Stage Three

How can you calculate how much energy, money and carbon you are saving?

You get a virtual energy manager, available 24 hours a day, and all the info you need in an easy-to-understand format.

Eniscope Analytics is a web-based, energy diagnostics tool that gives you rich insights into your historical energy consumption and the health of your power supply. It's intelligent, flexible, easy to use, easily accessible and simple to understand. Simply go online (using a PC, laptop, smartphone) to get detailed energy analysis on any equipment, in any building, in any country, at any time.

Key benefits:

- Compare – See numerous meters on the same performance chart

- Itemise – View consumption by building, department, circuit or machine

- Plan – Cost tracking in any currency with spending forecasts

- Prevention – Monitor power quality to avoid maintenance & safety issues

- Reports – Daily email reports show improvements and expose weaknesses

Stage Four

How can you encourage your corporate commitment to energy conservation?

Saving energy can be easier and even look good with beautifully-designed display units.

An Eniscope system can power a range of cool, real-time energy displays. These displays can be strategically positioned around your building to create awareness among the occupants as to how energy is being used. And because the benefits copy can be seen in real time, they inspire people to create better energy saving habits too. The displays can even include league tables, promoting healthy competition between staff members or even between sites in a multi-site estate.
